Introduction

Chemical Looping Combustion and gasification Technologies are the prospect processes to realize high efficiency coal utilization with CO₂ captures. It is one of the collaboration field of Theme 2 “Coal Conversion Technologies” supported by Advanced Coal Technology Consortia (ACTC) of U.S.-China Clean Energy Research Center (CERC). To promote the collaboration and academic exchanges among the partners from both countries, half day workshop will be held in the morning of September 30, 2013 at West Virginia University in Morgantown, WV.

Scope:

This workshop will focus on the related processes of chemical looping technologies for coal utilization as follows,

1. Chemical looping gasification processes with Calcium based CO₂ sorbent;
2. Chemical looping combustion process for solid fuel utilization
3. Tech-economic analysis for the coal utilization process with chemical looping technologies
4. R&D on CO₂/O₂ Carriers
5. Others related to chemical looping process

Important Dates

Submission of Short Abstract: August 15
Workshop: September 30

All Correspondence:
Ismail B. Celik, Professor
Mechanical and Aerospace Engineering
West Virginia University
E-mail: Ismail.Celik@mail.wvu.edu
Tel: 304 293 3209

Professor Wang Qinhui
State Key Lab on Clean Energy Utilization,
Zhejiang University, Hangzhou, 310027
E-mail: qhwang@zju.edu.cn
